Solar Panels from TAEC™ — 80w PV

The Alternative Energy Company

Polycrystalline solar cells are blue in colour, with the individual crystals being visible from multiple angles. The cells are cut to a square shape which gives the best power production for a given panel size. The design ensures that the cells will pick up the light from multiple directions. They work more efficiently in low light and they are also very durable. These systems are ideal for charging storage batteries to power remote homes, recreational vehicles, boats, telecommunications systems and other consumer and commercial applications.

SPECIFICATIONS

- Nominal Max Output — 80W
- Nominal Open Circuit Voltage — 21.6V
- Nominal Short Circuit Current — 5.00A
- Nominal Max Output Voltage — 17.2V
- Nominal Max Output Current — 4.65A
- Dimensions — 117cm x 55cm X 3cm
